

GLENTREE SERENITY · NADERGUL, HYDERABAD

Glentree OS

The operating system for a 184-villa estate.

Everything in this deck is running in production today — connected to live Meta, YouTube and LinkedIn accounts, a live WhatsApp number and a live voice line. No mockups, no sample data.

API SURFACE

63 routes

STATUS

Live

Six capabilities that did not exist at the last review.

Each one is wired end to end — not a screen waiting for a backend.

NEW

Interactive master plan

All 182 plotted villas from the sanctioned plan. Click any villa for live sale status, plot area and cluster.

NEW

WhatsApp sales agent

Answers buyers autonomously in English, Telugu and Hindi. Qualifies, books site visits, collects loan documents.

NEW

AI voice agent

Handles inbound and outbound calls, transcribes every one, extracts the requirement and raises a lead.

NEW

Autonomous video pipeline

One upload becomes a branded, captioned, archived reel published to four networks without a second click.

NEW

Loan case management

KYC checklists, Aadhaar/PAN/statement capture, eligibility checks and bank submission tracked per buyer.

NEW

Role-based access

Seven roles and twenty permissions, enforced in the database itself — not in the interface where it can be bypassed.

Two agents that work the hours your team cannot.

Both are live. Transcripts, extracted requirements and the leads they raise land in the same CRM your sales team already uses.

LIVE · REPLIES 24/7

WhatsApp Sales Agent

Buyer: “What is the price and layout for a 3BHK villa?”

Agent: “The 3BHK follows our 200 sq yd layout — 3 bedrooms, living, dining/kitchen, utility, puja, lift shaft and parking, plus a study and terrace room. Shall I book a site visit?”

LIVE LINE

AI Voice Agent

Every call is logged with caller, time, duration and outcome, then transcribed in full.

The agent extracts the buyer's requirement and raises a lead automatically — nothing waits on someone remembering to write it down.

English · Telugu · Hindi · Site-visit booking · Aadhaar, PAN & bank statement capture · Loan eligibility

LANGUAGES SPOKEN

Every villa on the plan, with its status attached.

Villa numbers and plot areas read from the sanctioned master plan. Status updates the moment an enquiry, booking or block is recorded.

Each square is one villa, coloured by its current sales status.

The site office and the dashboard read the same inventory. A villa blocked at the site is blocked on screen — so the plan shown to a buyer is never behind the sales desk.

182

VILLAS PLOTTED ON THE SANCTIONED PLAN

Available	100
No leads yet	32
Enquiry	22
Deal pending	13
Blocked	6
Sold	9

Upload once. Four networks, untouched by hand.

Every stage reports success or the exact reason it failed — never a silent drop.

01

Overlay

Watermark, 9:16 reframe, colour grade and brand outro applied automatically.

02

Archive

Master file synced to Google Drive before anything publishes, so the original is never lost.

03

Copy

Captions, hooks, hashtags and YouTube SEO tags generated per network — not copy-pasted across.

04

Distribute

Published to Instagram, YouTube, Facebook and X, with a delivery confirmation for each.

4

ASPECT RATIOS RENDERED

500 MB

MAXIMUM UPLOAD SIZE

7

PUBLISHABLE NETWORKS

0

MANUAL STEPS REQUIRED

Four channels, one truth.

Each network reports what it actually can — nothing is invented to fill a gap. Figures pulled live from Meta, YouTube and LinkedIn.

Live

connected via publishing connector

Engagement heat-map

Rate by day and hour, shrunk toward the account mean so one lucky post cannot invent a false hotspot.

Format performance

Reels against shorts against stills — average reach per post, so the next brief is decided by evidence.

Ranked recommendations

Analysers surface what to do next, ordered by severity and confidence-weighted impact.

Six hubs. One permission model.

Access to customer records is granted deliberately, one person at a time. A user who can sign in still sees nothing until an administrator places them.

MANAGEMENT

Control Centre

Executive pipeline, team workload, SLA thresholds and audit oversight.

SALES QUEUE

Sales Workspace

Active enquiries, call triggers, WhatsApp threads and the follow-up scheduler.

DEALS

Deal Pipeline

Kanban across visit scheduled, negotiation and token deposit.

AI VOICE

Voice Agents

Outbound calling, multilingual scripts and every call transcript.

FINANCE

Loan Cases

KYC checklists, eligibility verification and bank submissions.

SUPPORT

Team Messages

Internal threads and department handovers, attachments scoped per tenant.

7 roles · 20 discrete permissions · 53 grants · 9 storage policies, every one tenant-scoped

Built to be audited, not just demonstrated.

Honest empty states

Where there is no data, the screen says so. Nothing is invented to make a dashboard look populated.

Delivery confirmation

Every publish and every message reports success — or the exact reason it failed, in plain words.

Tenant isolation

Enforced in the database. One estate cannot read or delete another's files, even through a bug in the app.

Append-only audit log

Entries name the actor who wrote them and cannot be edited or removed afterwards.

Verified against live APIs

Meta, YouTube and LinkedIn credentials tested end to end — not assumed from configuration.

LINES OF CODE

445

AUTOMATED TESTS

ONE PLATFORM

Marketing, sales, voice, loans and site inventory — in one place.

Two projects already run on it: Glentree Serenity and Onyx Apartments. The estate model is not hard-coded to one site — the next project is a configuration, not a rebuild.
